Rola Emad Nofal

Cybersecurity Specialist

rolaemadnofal@gmail.com 00962790760833 Rola Nofal

SUMMARY

Cybersecurity Specialist and SOC Analyst with hands-on experience in Security Operations, IT Infrastructure, Enterprise Systems, and AI-powered autonomous drone technologies. Experienced in security monitoring, incident detection, log analysis, vulnerability analysis, and SIEM tools including Wazuh, ThreatDefence, and Splunk. Skilled in investigating security incidents, analyzing CVEs, and supporting Windows and Linux environments. Strong knowledge of the MITRE ATT&CK framework, network security fundamentals, security automation, AI/ML, and UAV cybersecurity. Experienced in developing and testing AI-driven drone systems focused on autonomous control, threat detection, attack response, and identifying unauthorized activities.

EXPERIENCE

SOC Analyst | Green Circle

October 2025 – January 2026

- Diagnosed and troubleshot complex security incidents, including account compromises, malware, and brute-force attempts.
- Analyzed logs across diverse client environments to identify potential technical weaknesses and security threats.
- Communicated directly with clients to validate incidents and provide guidance on technical security improvements.
- Prepared comprehensive weekly and monthly reports, including CVE analysis with severity scoring and remediation steps.
- Developed automated workflows using N8N and AI to enhance SOC operational efficiency.

SOC Analyst Trainee | Green Circle

July 2025 – October 2025

- Supported the SOC team in daily monitoring and initial triage of security alerts using Threatdefence and Wazuh.
- Assisted in log analysis and documented suspicious network activities.

AI Drone & Cybersecurity Intern | Jordan Air Cargo & Defense Industries

March 2026 – Present

- Contributed to the development and testing of AI-powered drone systems, combining autonomous control, cybersecurity, and intelligent threat detection.
- Gained hands-on experience in drone programming, AI/ML integration, UAV communication, and simulation environments.
- Worked on cybersecurity mechanisms for detecting and responding to malicious activities and potential attacks targeting autonomous drone systems.
- Gained hands-on experience in Data Center operations, ensuring hardware stability and connectivity.
- Assisted in managing and configuring Windows and Linux Servers to support enterprise operations.
- Configured and managed DHCP scopes to ensure seamless network connectivity for internal users.
- Provided technical support and troubleshooting for ERP systems, resolving user issues and maintaining data integrity.

TECHNICAL SKILLS

Security Operations (SOC):
Incident Detection & Response, Alert Triage, Log Analysis, Threat Intelligence, SIEM Monitoring, MITRE ATT&CK, CVE Analysis, Malware & Brute Force Investigation

SIEM & Security Tools:
Threatdefence, Wazuh, Suricata, Microsoft Defender, Threat Detection Platforms

Infrastructure & Networking:
Windows Server Administration, Linux (Ubuntu/Kali), DHCP, DNS, TCP/IP, Packet Analysis, Data Center Operations

Cloud Security:
AWS (Cloud Practitioner), Microsoft Azure Security & Compliance Fundamentals

Automation & AI:
N8N Workflow Automation, AI-assisted Security Reporting, Security Process Automation

Enterprise Systems:
ERP Systems Support & Troubleshooting

Operating Systems:
Windows Server, Linux (Ubuntu, Kali Linux)

PROJECTS

EV-Guard Automotive Cybersecurity Monitoring System

- Designed a security monitoring solution focused on detecting and analyzing cyber attacks targeting connected vehicles (EV environment / telematics systems).
- Implemented **Splunk SIEM** to ingest and monitor security logs from vehicle-related systems and detect potential cyber attack patterns in real time.
- Developed detection logic to identify automotive cybersecurity threats such as unauthorized access attempts, anomalous network behavior, and potential attack indicators.
- Integrated **Splunk alerts with N8N workflow automation** to trigger real-time incident processing and structured response pipelines.
- Leveraged **AI-assisted analysis** to enrich detected security events, generate contextual explanations, and classify attack severity based on potential impact.
- Automated the generation of structured security incident reports and sent them to predefined workflows for SOC-style reporting and escalation

AI-Powered Autonomous Drone Cybersecurity System

- Developed a large-scale AI-powered autonomous drone system capable of intelligent decision-making and autonomous control.

- Integrated AI to enable the drone to identify suspicious activities, detect potential threats, and autonomously respond to security incidents.

- Designed and tested cybersecurity mechanisms to protect the drone against attempted attacks, unauthorized control, and malicious manipulation.

- Developed scenarios simulating smuggling/unauthorized transport attempts, enabling the AI system to identify suspicious behavior and take appropriate defensive actions.

- Combined Artificial Intelligence, UAV programming, cybersecurity, and autonomous systems into an integrated security-focused drone solution.

EDUCATION

Bachelor of Cybersecurity Zarqa Private University | 2022 – 2026

CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02) – [In Progress]

- Microsoft Security, Compliance, and Identity Fundamentals (SC-900) – [In Progress]

- Cybersecurity Training Camp (65 hours): Python | CCNA | Security+ | Linux+ | CEH | DF

- Machine Learning Using Python

- Cybersecurity Bootcamp (Cohort 3)

- Problem Solving Programming

- TOT (Training of Trainers)

SOFT SKILLS

- Incident Response & Problem Solving
- AI
- Technical Communication
- Team Collaboration
- Analytical Thinking
- Fast Learning & Adaptability
